

Banking and Financial Services

Create modern, engaging and secure banking experiences

Highlights

Secure and reliable open banking using APIs for sharing financial data between banks and third-party service providers

Fast and easy regulation adoption with simplified access to core system data and robotic process automation (RPA) capabilities to perform recurring, rule-based, high-volume tasks

Artificial intelligence (AI) and machine learning for data analysis and automated services, with improved and mobile-first user experience (UX)

Modular solution, microservices-based components and service offerings, designed for or deployable to the cloud and in a SaaS model

Technical agility to quickly introduce new customer-focused services and service offerings, with low-code/no-code capabilities

Omnichannel capabilities and high-quality support services

Customer and regulatory needs are changing. Add on competitive pressures, and today's financial institutions must be able to digitally transform all areas of operations, technology and customer experience — including core legacy systems.

Complicating digital transformation efforts — and making those efforts more critical — financial institutions are among the most targeted organizations in cyber attacks. Global banks name data and security concerns among the obstacles to digital transformation, along with limited resources, regulatory compliance and legacy system complexity.
